Viscoelastic properties and shock response of coarse-grained models of multiblock versus diblock copolymers: Insights into dissipative properties of polyurea

Bedri Arman, A. Srinivas Reddy, and Gaurav Arya*

Figure S1. Plot of tan δ as a function of ω for the four polymeric systems investigated in this study, emphasizing the purely dissipative nature (tan δ > 1) of the two homopolymers and the double crossover in the dissipative nature of the two block copolymers.
